2 - HAZARDS IDENTIFICATION

The potential health hazards are related to dust generated from these materials during the use of power tools and sanding.

The intact BGC Fibre Cement products do not give off dust or fume during installation or when installed. However, cutting, breaking, drilling or sawing the boards may generate dust. Inhaling dust liberated from BGC Fibre Cement may aggravate pre-existing respiratory conditions and may cause cancer.

Smoking and inhalation of airborne particulates from other sources may increase the risk of lung disease.

Work areas and storage areas should be deemed smoke-free zones.

4 - FIRST AID MEASURES

SWALLOWED
Give copious amounts of water to drink.

EYE
Flush thoroughly with flowing water for at least ten minutes. If symptoms persist, seek medical attention.

SKIN
Wash thoroughly with soap and water.

INHALED
Remove to fresh air.

ADVICE TO DOCTOR
Treat symptomatically.

5 - FIRE FIGHTING MEASURES

FIRE AND EXPLOSION HAZARDS
BGC Fibre Cement products are non-flammable and non-combustible.

SUITABLE EXTINGUISHING SUBSTANCES
Not applicable.

UNSUITABLE EXTINGUISHING SUBSTANCES
Not applicable.

PRODUCT OF COMBUSTION
BGC Fibre Cement products are non-combustible and non-flammable.

6 - ACCIDENTAL RELEASE MEASURES

SPILLS AND DISPOSAL
Use wet sweeping and/or vacuuming to clean up dust and waste. Bagged waste should be placed in containers and disposed of with other construction waste in accordance with local authority guidelines.

7 - STORAGE AND HANDLING

STORAGE
Fibre cement sheets should be stored flat and level in a covered dry area.

HANDLING
Crystalline silica dust may be generated during processing and handling. Use appropriate personal protective equipment to reduce exposure to respirable silica dust. Keep dust generation to a minimum using proper tools.

Wear protective equipment to prevent skin and eye contamination. Manual handling should be in accordance with Manual Handling Regulations and Codes.

8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

EXPOSURE STANDARDS
BGC Fibre Cement has adopted the following maximum exposure limits, corresponding to the limits set out by the CoA, NOHSC, Exposure Standards for Atmospheric Contaminants in the Occupational Environment:

- Calcium silica: 10 mg/m³ time-weighted average (TWA) as inspirable dust
- Cellulose: 10 mg/ m³ TWA as respirable dust
- Crystalline silica (quartz): 0.1 mg/ m³ TWA as respirable dust
- Aluminium Trihydroxide: 10 mg/m³ time-weighted average as inspirable dust

BGC Fibre Cement recommends keeping exposures to dust as low as practicable and work in a well-ventilated space.

ENGINEERING CONTROLS
No dust is generated, unless the fibre cement is cut. Keep exposures to dust as low as practicable, preferably below 5 mg/m³ TWA (time-weighted average) of inspirable dust, to prevent respiratory discomfort. Work in the open air or near external openings in the building, for adequate ventilation. Where dust is generated, in confined spaces, local mechanical ventilation should be used, to direct the dust away from the work areas. Personal protective equipment should be used in confined spaces and where dust levels exceed the maximum levels.
ENGINEERING CONTROLS
Use safe work practices to minimize dust release and exposure. Clean work areas regularly by wet sweeping or vacuuming with a HEPA filtered vacuum.

VENTILATION
Where safe work practices, adequate engineering and material handling controls are in place, ventilation is not normally required. Use local mechanical ventilation and or dust extraction in confined areas and where dust could escape into the working environment.

Tools and Equipment

REPAIR AND MAINTENANCE
Vacuum and or wipe down all tools and equipment prior to maintenance and repair work. Avoid compressed air cleaning where possible, and wear eye and respiratory protection, and clothing as listed below.

SKIN PROTECTION
Avoid direct skin contact with fibre cement products. Wear loose appropriate clothing, such as long sleeved shirts and long trousers, head protection and standard duty leather or equivalent gloves, which comply with Australian Standard AS 2161: Industrial Safety Gloves and Mittens. Wash work clothes regularly and do not shake out dust.

EYE PROTECTION
Wear dust resistant non-fogging safety goggles or glasses, which comply with Australian and New Zealand Standard AS/NZS 1336: Recommended Practices for Eye Protection.

RESPIRATORY PROTECTION
Where safe work practices, adequate engineering and material handling controls are in place and used none may be required. However, BGC Fibre Cement suggests that L or M particulate respirator (dust mask), which comply with Australian and New Zealand Standard AS/NZS 1715: Selection, Use and Maintenance of Respiratory Protective Devices, and Australian and New Zealand Standard AS/ NZS 1716: Respiratory Protective Devices when Exposed to Dust, be used at all times.

PERSONAL HYGEINE
Do not smoke whilst handling and working with fibre cement. Wash dust from skin with mild soap and water after working with fibre cement.

FLAMMABILITY
Fibre cement products are non-combustible and non-flammable.

9 - PHYSICAL AND CHEMICAL PROPERTIES

APPEARANCE
Factory applied blue tint on face of the Duratex™, and a white tint to the face of 4.5, 6.0, 9.0 and 12mm Compressed while all other products are cement grey finish.

BOILING POINT (°C)
Not Applicable

SPECIFIC GRAVITY (H₂O = 1)
Not Relevant

VAPOUR PRESSURE
Not Applicable

FLAMMABILITY LIMITS
Not Flammable

FLASH POINT
Not Applicable

REACTIVITY (I.E. WITH WATER OR AIR)
Not Reactive

SOLUBILITY IN WATER
Not Relevant

ODOUR THRESHOLD
Slight cement odour

AUTO-IGNITION TEMPERATURE (°C)
-

LOWER EXPLOSION LIMIT
-

SELF ACCELERATING DECOMPOSITION
-

UPPER EXPLOSION LIMIT
-

10 - STABILITY AND REACTIVITY

CHEMICAL STABILITY
Stable and non-reactive.

HAZARDOUS REACTIONS
None

CONDITIONS TO AVOID
Dust generation during handling, processing and inhalation.

INCOMPATIBLE MATERIALS
None

HAZARDOUS DECOMPOSITION PRODUCTS
None
11 - TOXICOLOGICAL INFORMATION

Health Effects: Acute (short term)

SWALLOWED: Unlikely to occur, however may result in symptoms of acute indigestion.

EYES: Excessive dust may cause eye irritation.

SKIN: The dust, particularly in association with heat and sweat, can cause irritation, but it is not absorbed through skin.

INHALED: Inhaled dust may cause nasal, throat and lung irritation, symptomatic through excess mucus and coughing.

Health Effects: Chronic (long term)

INHALED: If respirable crystalline silica levels are not controlled, repeated exposure to excessive dusts of fibre cement products could result in chronic lung disease Silicosis. However, if the practices noted in this SDS are followed during cutting and sanding, exposure to airborne dusts should be within recommended occupational exposure standards and no long-term effects are expected.

12 - ECOLOGICAL INFORMATION

ECO-TOXICITY: BGC Fibre Cement products are not toxic to aquatic and terrestrial organisms.

PERSISTENCE AND DEGRADABILITY: No data

BIOACCUMULATIVE DATA: No data

MOBILITY IN SOIL: A low mobility would be expected in a landfill situation.

13 - DISPOSAL CONSIDERATION

DISPOSAL: BGC Fibre Cement products must be disposed into a landfill site in accordance with local authority guidelines. Measures should be taken to prevent dust generation during disposal, and exposure and personal precautions should be observed (see above).

14 - TRANSPORT INFORMATION

TRANSPORT: No special transport requirements are necessary.

15 - REGULATORY INFORMATION

Not scheduled.

16 - OTHER INFORMATION
