

## Thermal Break Tape BGC Product Code - THERMAROLL12.5

Thermal breaks may be required for steel framed buildings. Thermal breaks are required to have an R value of R0.2 in order to meet the NCC requirements for a Thermal break. Where compressive seals are required on a steel frame, this can be satisfied by using a Thermal Break Tape.

BGC can offer a Thermal Break Tape which satisfies these requirements.

## EPDM Foam Gasket – BGC Product Code 845

The thermal break properties of EPDM foam tape (845) have been withdrawn and can no longer be used as a thermal break.

BGC still recommends and endorses the use of this product as a compressive seal with Durascape™, Duragroove™, Stratum™ range of weatherboards, Duracom™, and Duracom Greystone™ as outlined in our installation manuals.

If you have any further queries regarding the use of BGC EPDM Foam Gasket or Thermal Break Tape please contact your local BGC state office on 1300 652 242 or through our website [bgcinnovadesign.com.au](http://bgcinnovadesign.com.au)
